S U M M A R Y

Fullstack Software Engineer and Technical Lead who structures systems end-to-end: data model, back-end and interface speaking the same domain language. I design Domain-Driven back-ends in Spring Boot and Node.js, split into services with explicit boundaries and contracts, over versioned PostgreSQL schemas, applying design patterns and Test-Driven Development; on the front, Angular and React applications on top of design systems, integrated with those RESTful APIs. My workflow is AI-native: Claude Code, custom agents, skills and automated workflows for planning, implementation, testing and pull request review. From intern to project lead in 21 months.

E D U C A T I O N

Universidade de Fortaleza (UNIFOR), Fortaleza, CE — 2025.1 - Present
B.S. in Computer Science

Universidade Federal do Ceará (UFC), Fortaleza, CE — 2022.1 - 2024.2
B.S. in Computer Science

P R O F E S S I O N A L E X P E R I E N C E

Fullstack Engineer (Angular + Spring Boot) - **Colégio Christus**, Jul. 2026 – Present

- Structure Exitus Gestor across the whole stack: PostgreSQL data model, Spring Boot domain layer and Angular applications integrated with its RESTful APIs.
- Apply Domain-Driven Design to split the platform into services with explicit boundaries and contracts, so each one evolves and deploys without coupling.
- Drive Test-Driven Development, with business rules explicit and covered by tests from day one.
- Version every schema change with Flyway migrations, making database evolution reproducible across environments.
- Build agentic development workflows with Claude Code — custom agents, skills and automated flows from spec to tests — and automate pull request review with AI.

Project Leader (React + Node.js + PostgreSQL) - **Colégio Christus**, Jan. 2026 – Jun. 2026

- Led the end-to-end development of an AI-assisted medical platform for clinical decision support, including AI automations for consultations and development routines.
- Architected the fullstack solution — data model, Node.js services and React front-end — for scalability, performance and maintainability.
- Mentored the team on Git workflows, code reviews, clean code and design patterns.

FullStack Developer (Angular + Spring Boot) - **Colégio Christus**, Jan. 2025 – Dec. 2025

- Developed the Exitus educational system end-to-end, across front-end, back-end and database.
- Integrated AI services for automated question validation and built webhook integrations with cloud deployment management.

FullStack Intern (Angular + Spring Boot) - **Colégio Christus**, Apr. 2024 – Dec. 2024

- Built Exitus features with Angular and TypeScript on the front and Spring Boot on the back, focusing on usability and accessibility.

PROJECTS & EXTRACURRICULAR ACTIVITIES

QAssistant — 2026

- Built a VS Code extension that turns selected commits into traceable QA validation packages: AI-written summaries, test prompts, OpenProject tasks and agent-ready context docs.
- Designed the integration layer between Git history, the OpenProject API and AI services, with a React and TypeScript interface inside the editor.

AquaCensus — 2024

- Modeled provenance as first-class data for marine field research — who collected what, from which vessel, for which lab — with roles and permissions on top.
- Built the Node.js and Express API over Supabase, plus a React and TypeScript front-end with operational dashboards.

Pokémon Team Builder — 2025

- Shipped a live PWA for competitive team building with 15+ sections, EN/PT, light/dark themes and guest-to-cloud accounts, using React, TypeScript and Vite.
- Built the data pipeline behind it: ladder usage from 1M+ games, Smogon sets and tournament teams normalized into one model the builder queries live.

PET Computação Scholar (UFC) — May 2022 – Oct. 2023

- Collaborated on academic research projects and organized the Ceará Informatics Olympiad.
- Designed and administered programming logic exams, fostering tech education for local students.

TECHNICAL SKILLS

- **Back-end & Architecture:** Java, Spring Boot, Node.js, Express, RESTful API Design & Integration, Domain-Driven Design (DDD), Microservices, Design Patterns.
- **Databases:** PostgreSQL, MySQL, Supabase, Data Modeling, Flyway Schema Migrations.
- **Front-end & UI/UX:** TypeScript, JavaScript, Angular, React, HTML5, CSS3, Sass, Tailwind CSS, Design Systems, Figma.
- **Quality & DevOps:** Test-Driven Development (TDD), Code Review, Git/GitHub, CI/CD, Linux, Postman, Cloud Deployment.
- **AI-Assisted Development:** Claude Code, Agentic Workflows, Custom Agents & Skills, AI Pull Request Review, Context Engineering.
- **Languages:** English (Fluent), French (Basic), Portuguese (Native).
- **Certifications:**
 - React 19: The Complete Guide to Modern Web Apps - Educative (17h).
 - Santander Academy Python (8h).
 - Python for Data - Asimov Academy. (4h).
 - PHP Online Course - Rocketseat (5h).
